6/1/18 (Dr. Jon Warner)	<p>Dear Members of the Codman Shoulder Society,</p> <p>Attached please find a case presentation of my patient. Any comments or advice on this case would be greatly appreciated. Thank you in advance for your help.</p>	Case Presentation PPT
6/2/18 (Dr. Bassem Elhassan)	<p>Dear JP</p> <p>I am concerned about possible infection in this patient. I would work her up for infection including possible arthroscopic biopsies that is more reliable for P Acne.</p>	
6/2/18 (Dr. Ron Navarro)	<p>If infection work up negative I might not be too aggressive to get ROM as what you have is actually pretty good. We can't make everyone perfect. She has had several surgeries.</p> <p>I would aim at pain relief w all the modalities we have at our disposal. I am at a meeting and saw a vendor w a nerve device which can selectively peripherally affect sensory nerves via ultrasound guidance. Is there an application here in conjunction with a anesthesia pain doc who can do the ultrasound? Myoscience is the company.</p>	
6/2/18 (Dr. John Macy)	<p>JP, for some reason , I'm unable to respond "to all" for the CSS cases (to many people on the CC list?). Ive tried to respond to other CSS cases you have posted, but always get kicked back to me as unsendable. So I'm replying just to you for this case.</p> <p>What is this person's EUA demonstrate? Is she stiff under anesthesia, or just in the clinic exam? Is there some underlying musculoskeletal issue or even a psych issue causing this persistent stiffness.Is selective botox injections a possible solution? I have a few stiff "non-Laterjet" cases where this was helpful. I have never seen this after a Laterjet. At least she's stable?</p>	
6/3/18 (Dr. Jon Warner)	<p><i>John: Your Comcast platform may have a limit on number of emails you can send as cc. I found this with MSN account. When I installed outlook on my laptop it was no longer a problem. We will send all comments as post to case for future reference and thus as a group may learn something.</i></p> <p><i>For this patient EUA showed stiffness as I indicated. No psych issues I'm aware of.</i></p>	
6/3/18 (Dr. Michael Freehill)	<p>Agree with Bassem- rule out infection first. Stable joint now. Once/if p.acnes ruled out- perhaps injection into GH joint to determine intra-articular etiology of pain or not (scapula</p>	

	issue?). What was the history of the tracks in the humerus- I did not see that in history? Thanks for these cases and the continued education.	
6/2/18 (Dr. Greg Mallo)	<p>Hi Dr. Warner-</p> <p>Found this article interesting. Article suggests postop stiffness May be due to low grade infection (as Bassem suggested).</p> <p>The authors treat postop stiffness with antibiotics.</p> <p>Interesting concept - though of course more evidence is needed.</p> <p>Also wanted to thank you for the resection arthroplasty case you shared as well as the resection arthroplasty module on your website.</p> <p>I had a very sick lady I needed to remove an infected reverse from yesterday. The module helped me show her (using the video what her likely could be).</p>	
6/4/18 (Dr. Jon Warner)	<i>This answer and article are relevant to our patient with ongoing stiffness which we sent to CSS for their input</i>	Low-grade infections in nonarthroplasty shoulder surgery (Khan et al, JSES 2017, 26: 1553-1561)
6/4/18 (Dr. Emilie Cheung)	I agree with the others. Infection is at the top of the differential diagnosis. Curious to see how she ends up.
